Figure S9. Sensitivity of model outputs varies with VEGF concentration. Sensitivity of outputs to small changes in parameters and initial conditions. Values are average fold change in selected outputs for a 1-fold change in the specified parameter. A. \([V] = 2\) ng/mL. Scale: Black = 0, Bright red (maximum) = 0.77 B. \([V] = 200\) ng/mL. Scale: Black = 0, Bright red = 1.03 (maximum).
