Introductory Unit	The Genome of HIV         Students construct         1. A 3-D model of HIV         2. A poster containing         • The complete genome of HIV         • Function and nucleotide sequence of each of the genes         • Function and amino acid sequence of major proteins
Modeling the Genome of HIV •	Students relate structures in 3-D model to specific genes and proteins in their genomic poster Students produce an online genomic scavenger hunt for a different virus
