

Table S2: The 10 genes with smallest p -values identified using the exact permutational test in cancer data. For each cancer type, we show the top 10 genes, their rank, and p -value using the exact permutational test, the asymptotic permutational test, the exact conditional test, and R `survdiff`. The number of samples with a mutation in the gene is also reported.

cancer type	gene	exact permutational		asyp. permutational		exact conditional		R <code>survdiff</code>		num. mut.
		rank	p	rank	p	rank	p	rank	p
