

CORRECTION

Correction: The Zinc-Finger Protein SOP1 Is Required for a Subset of the Nuclear Exosome Functions in Arabidopsis

Kian Hématy, Yannick Bellec, Ram Podicheti, Nathalie Bouteiller, Pauline Anne, Céline Morineau, Richard P. Haslam, Frederic Beaudoin, Johnathan A. Napier, Keithanne Mockaitis, Dominique Gagliardi, Hervé Vaucheret, Heike Lange, Jean-Denis Faure

[S2 Table](#) is incomplete. Please view the complete [S2 Table](#) here.

There is an error in the third subsection of the Results section, entitled “*sop1* specifically suppresses the splicing-defective *pas2-1* allele”. The sentence “For this purpose, we introgressed *sop1-5*, a knock-out allele, that harbours a T-DNA insertion in the At5g21580 locus which encodes the SOP1 protein (see below), into the original *pas2-1* mutant as well as into *pas1-2*, *pas2-4* and *pas3-1* mutants [16,21,22].” should read: “For this purpose, we introgressed *sop1-5*, a knock-out allele, that harbours a T-DNA insertion in the At1g21580 locus which encodes the SOP1 protein (see below), into the original *pas2-1* mutant as well as into *pas1-2*, *pas2-4* and *pas3-1* mutants [16,21,22].”
