S8 Fig. Expression of PP2C.D5-HA protein complements the hypocotyl growth phenotype of pp2c.d5 seedlings. (A) Hypocotyl length of 8-day-old seedlings grown under 30 μE m⁻² s⁻¹ light. Error bars = SEM (n = 33 - 58). Different letters above the bars indicate significant differences (P < 0.05). (B) Western blot analyses of PP2C.D5-HA protein expression. Twenty-five micrograms of total proteins were loaded. PP2C.D5-HA and the SEC12 loading control were detected by anti-HA and anti-SEC12 antibodies, respectively.
