

Table S3 Summary of cilia defects with *DNAH6* knockdown

Tissue	Cilia Defects Observed with <i>DNAH6</i> Knockdown
Zebrafish Kupffer's Vesicle	shorter cilia, largely immotile/dyskinetic
Human Nasal Epithelia	sparse cilia, cilia of smaller caliper mostly immotile/dyskinetic,
Mouse Tracheal Epithelia	sparse ciliation, most areas bald, immotile/dyskinetic ciliary motion
