

S3 Fig. *DOM34* transcript levels in *pmt* strains. Total RNA of strains CAF2-1 (+/+), SPCa2 (*pmt1/pmt1*), SPCa4 (*pmt2/PMT2*), SPCa6 (*pmt4/pmt4*), SPCa10 (*pmt5/pmt5*) and SPCa8 (*pmt6/pmt6*) was isolated and the relative *DOM34* transcript level (RTL) was determined by qPCR using the *ACT1* transcript as the reference. Values obtained for two biological replicates are shown as black and white bars.
