Figure S3. Kaplan–Meier Survival Plots of Recurrence Free Survival of Patients with early HCC stratified by the HIR signature.

Patients with early stage HCC (Barcelona Clinic Liver Cancer [BCLC] stage 0 and A) (n=290) were stratified by the HIR signature. Patients with very early recurrence (<1 year) and those with intermediate recurrence (1 to 2 years) were plotted in upper panel, and those with late recurrence (>2 years, >3 years, and >4 years) in lower panels. p values were obtained from the log-rank test. The + symbol denotes observations that were censored owing to loss to follow-up or on the date of the last contact.
