S1 Fig. Single-step filtering procedure used to remove leukocytes from clinical blood samples in a field laboratory. A, BioR 01 Plus leukocyte depletion filter (Fresenius Kabi, Bad Homburg, Germany). B and C, cutting off with a scissor, under sterile conditions, the tubing connecting the filtering device to the 400-ml blood storage bag and the adapter. D, use of filtering device in a laminar flow hood, indicating how the blood sample is introduced and collected, with 10-ml syringes, after filtering.
