Comparison of multi-parallel qPCR and double-slide Kato-Katz for detection of soil-transmitted helminth infection among children in rural Bangladesh

S5 Figure. Probability that a stool sample was classified as positive for *A. lumbricoides* using Kato-Katz among those classified as negative by qPCR by individual Kato-Katz technician

Each bar indicates the probability that a sample was classified as positive by Kato-Katz among those classified as negative by qPCR for an individual technician. The black vertical line indicates the 95% confidence interval.
