

S8 Table. Median (IQR) times (seconds) per sample per device in sample set testing (A) and results of the mixed effects generalised linear regression model (B)

Table A. Median (IQR) sampling, device testing and recording times (seconds) per sample per device in sample set testing

P-values for comparison between devices of ln (sampling time), ln (device testing time) and ln (recording time) using mixed effects generalised linear regression models adjusted on device and training, and clustered by inspectors and observers

	NIR-S-G1	MicroPHAZIR RX	Truscan RM	Progeny	4500a FTIR	PAD	Minilab
Median (IQR) sampling time (seconds)	50 (32-67)	96 (71-128)	101 (59-136)	110 (73-138)	242 (179-320)	229 (192-262)	632 (529-947)
