Figure S5: Proportions of 13,629 individuals in the 25 studies that were genotyped for the 36 CYP2D6* alleles.

Footnotes: CYP2D6 alleles genotyped and reported are represented by the green bars, and CYP2D6 alleles genotyped but not reported are represented by the red bars. The number inside the bars represents the percentage of the total participants genotyped. The Y-axis shows the function of the CYP2D6 alleles referenced from the CYP2D6 allele nomenclature[1] and from the recent updated sequencing data for the CYP2D6*11 allele,[2] or suggested from the original articles linked to from the CYP2D6 allele nomenclature website (http://www.cypalleles.ki.se) if no functional information was available.
