Supplemental Figure S1:
Virus isolation by plaque assay on MDCK cells from oral swabs of chickens infected with 1000 PFU collected at 2 dpi (wt n=15; ΔF2 n=15) and at 4 dpi (wt n=7; ΔF2 n=5). No live virus could be detected in swabs from 6 chickens in the wt-infected condition at day 2 pi, and from 9 chickens in the ΔF2-infected condition at day 2 pi.
