Global Regulator MorA affects Virulence-associated Protease Secretion in *Pseudomonas aeruginosa* PAO1

Supporting Information

**S1 Figure. Standard curve for elastase activity.** Activity measured with increasing units of *Pseudomonas aeruginosa* elastase on elastin congo-red (Sigma). Reaction buffer without elastase was used as blank. At end of 6 hr incubation, the absorbance of the supernatant containing cleaved congo-red was measured at 495nm.

\[
y = 0.8735x + 0.0188 \\
R^2 = 0.99636
\]
