S2 Fig. Biomass of the two most abundant herbivorous fishes in the Atoll, *Acanthurus chirurgus* and *A. coeruleus*, between closed and open pools. (*) indicate significant differences in the means between habitats (t-test for *A. chirurgus*: t=7.02, p<0.001; t-test for *A. coeruleus*: t= 2.16, p<0.05). Error bars represent standard error of the mean.
