LINGÜÍSTICA INGLESA: CORRIENTES SINTÁCTICA ACTUALES

Depto. Filología Inglesa, Francesa y Alemana (Universidad de Málaga)

NAME AND SURNAMES:  

ID NUMBER:  

DATE: 19.06.08.

FIRST TERM

1. Do only verbs assign theta roles? Provide some examples to illustrate your opinion.

2. What can you tell me about the Pro-drop parameters?

3. Analyse the following example: is it (un)grammatical? Comment on the role of there in the sentence:

   There occurred three accidents after lunch.

SECOND TERM

1. Analyse the following sentences (remember that the use of tree diagrams is voluntary):

   a) Poirot preferred to be an excellent teacher rather than a brilliant doctor.
   b) Poirot turned out to be an excellent teacher rather than a brilliant doctor.
   c) Poirot, was liable to be an excellent teacher rather than a brilliant doctor.

2. Are the following sentences (un)grammatical? Explain why:

   a) I consider very much him to be a good candidate.
   b) Miss Marple surely gave her pipe to Janvier.

3. What is exceptional about this sentence?

   For him to have agreed to the proposal is surprising.
4. Try to rescue these examples using what you know about Case Theory and/or c-command domains:

a) *Your parents to come to my wedding would be a smart move.
b) *Mary’s concern him.
c) *Poirot travelled John and me.
d) *Patrick should wash themselves every day.

5. Look at the following sentence: “My grandmother believed my boyfriend to be a liar”:

a) Is the sentence grammatical or ungrammatical? Why?
b) Now look at the second part of the sentence: [my boyfriend to be a liar]: is it a CP or an IP? Why?

6. Analyse the following sentence using as much theoretical support as you can:

He was fascinated by everything.
In a first impression people can think that only verbs can assign theta role, but with the following proofs we can observe how other words have the same capacity.

Firstly, nouns assign theta role of "marias". Secondly, prepositions assign theta role of "the chair". Consequently, prepositions between "the table and the chair" and the preposition between "assigns the role of agent" and the preposition between "assigns the role of agent" and "the chair" both assigns, the same way, assigns the role of agent to the noun "marias".

For instance, "it was done by her" in the first example and the second example make reference to an omission of a pronoun. This pro is not the empty category of a deep structure, it makes reference to an omitted pronoun. We have to mention the principle of economy, because...
That principle has the same objective: to omit words in order to say more without the use of them. This principle of economy and the pro-drop can appear only in languages that admit it because its grammatical is not affected. For example in Spanish we can say "llieve," but if we want to say that in English we have to say: "It is raining," because English, follows the rules of subject, verb object (SVO) and if we do not put the verb the sentence is ungrammatical. So, that pro-drop was to be related with languages that have a lot of inflections, in their vocabulary. Other example is "They are crazy". Here we need a context to know if "they" means in Spanish for example "Ellas o ellos". In Spanish we say directly "Ellas están locas".

3/4
There occurred three accidents after lunch.
We have a grammatical sentence because it does not violate the projection principle. Firstly we have to mention that there and three accidents are co-indexed in other words, they are referred to the same word, in this case to the three accidents. Then when we know that we observe that we have the subject. Secondly, each word has its theta role. The main inflection occurs assigns the role of agent (subject) to the three accidents and the preposition after gives case to lunch.

It has to be mentioned also that the transitive verb "occurred" has the needed Direct Object.

The most destacable thing here is the "there" that appears at the beginning of the sentence. We have to say about it that it is here to emphasize the sentence. It is one of the types of "there" linked with the first characteristic that is when it appears for necessity, for example "there are three books" and the second one, which appears when we do not have a concrete number of things: "there are some books". Type of 'there'?
This is a grammatical sentence. The main inflection assigns nominative case to Poirot (Subject). As we see in the diagram after the VP (prefer) we have a second IP but in this occasion we do not have subject as in the first one, for this reason we need to use the empty category pro to fill-in it, because if we do not use it we violate the case filter due to the subject position would be empty. This pro tells us that in that position "supposedly" is Poirot in the deep structure. After that, there is not more problems because each word has its case and there is not any violation of the case filter. There are three characteristics that the case assigners have in this sentence to justify all that I say:

- The head cannot give case himself.
- The case assigner is followed by the word that it gives case.
Poirot turned out to be an excellent teacher than an a brilliant doctor.

This sentence is grammatical too and the difference with the first one that it consists in a Raising Predicate. That verb belongs to the third type of raising verbs called semi-auxiliaries. Here to prove that it is a real raising predicate we can substitute the subject (Poirot) for dummy it (It) and the sentence is also grammatical.

The most decisive in that raising predicate is the subject to subject movement because if we do not that we violate the projection principle of the sentence. It consist into move the subject of the second inflection position to the first one, creating a trace in that place that indicates us it is referred to the Spec Poirot.

As in the first sentence to + infinitive does not assigns case because it is not possible. The main inflection gives theta role to the NP.
Poirot, was liable to be an excellent teacher rather than a brilliant doctor.

This is a grammatical sentence. The IP gives inflection to Poirot which is the subject and after that IP, we have a second IP (to), with the difference that here we do not have subject, so we need an empty category to supply that carence and by this way do not violate the case filter by which all the words have their own theta-role.

Apart of that, the sentence do not have any other problem because we have a NP at the end with a CP that is grammatical.

Raising predicate?
a) This sentence is ungrammatical because it violates the case filter. Here the IP has to give case to *him* and the adverb "very much" blocks it. To rescue the sentence it is needed a preposition that assigns case to him, if we do not have it, this sentence is not grammatical. Which preposition and where?

b) This sentence is grammatical because what we have between the inflection and Miss Marple is an adjective? and this type of words can appear here or at the end of the sentence. It does not block anything. This is the main difference between the previous sentence; adjectives do not need prepositions or any other word to constitute a grammatical sentence; it does not violate the case filter and everything is all right.

3) In that sentence we have an Exceptional Case Marking (ECM) because we have an accusative working as a nominative. This case is "him". This case is exceptional because if we put "lie" instead of "lier" the sentence would be ungrammatical. It is needed to use the accusative form to create a correct sentence.
a) Your parents to come to my wedding would be a smart move.

To rescue that sentence we have to insert the preposition for at the beginning of the sentence because if we do not put it there is any case assigner. Here the IP is to come but verbs to + infinitive cannot assign case, so for rescues the sentence because it gives case to your parents. By this way we do not violate the case filter and the sentence is grammatical.

b) Mary's concern to him.

in my opinion to rescue that sentence we can introduce the preposition "about" because here we do not have a verb which assigns case to Mary's concern, so concern assigns case to Mary's but there is no element that assigns case to him and by this way we violate the case filter. So if we use "about" between concern and him, the preposition will give case to him and the sentence will be grammatical.

c) Poiret travelled John and me.

Here we have the same situation as in the previous sentence, we violate the case filter and we need something to avoid it. For this reason I think that if we put the preposition "with" after the verb "travelled", the NP "John and me" will have case.
d) Patrick should wash themselves, every day

FM Here the situation is different than in the previous sentences. We know that Patrick opinions themselves, so they have to speak about the same (in this case Patrick). So if Patrick's c-command domain is “should was themselves every day” we have to change themselves and way there is agreement they are co-index.

5) My grandmother believed my boyfriend to be a liar

\[ 0.25 \] 0.5

a) This sentence is grammatical because there is no violation of the case filter, each word case, their own case.

In conclusion, there is anything wrong here as we can see in the previous tree.
b) I think it is an IP because as we can see in the previous diagram.

6) He was fascinated by everything.

It is a grammatical sentence. As we can see there is no violation here. The IP gives nominative case to He (subject) and it is the agent of the sentence. This is a passive sentence as we observe because we have BE + PAST PARTICIPLE and a clear patient introduced by "by".

The inflection is "was" because in the passivisation the auxiliary absorbs the ability of assigning case that the main verb has = CASE ABSORPTION.

Other characteristic of passives is that there is a noun phrase movement because if we do not have that, we violate the case filter, the subject position would be empty and the sentence would be ungrammatical.

And the last characteristic of passivisation is that the agent is introduced by "by". However, this particle does not always appear in sentences; it can be omitted if it obvious.
