S3 Fig. Accelerated kinetics of bone marrow regeneration and proliferating phenotype of CFU-GM colonies in entolimod-treated CD2F1 mice after LD$_{50/30}$ of TBI and entolimod treatment.

Male CD2F1 mice were irradiated with 9 Gy TBI and injected i.m. with vehicle or 200 µg/kg entolimod 25 h later. Groups of 5 mice were sacrificed at the indicated time points for evaluation of histopathology and bone marrow clonogenic potential. A: Representative microphotographs of hematoxylin-eosin-stained bone marrow sections. Scale bar – 100 µm. B: Appearance of CFU-GM colonies grown from bone marrow collected on day 7 after TBI.
