S2 Figure. Potential predicted distributions: RCP$_{8.5}$. Continuous suitability index predicted for (A) the current climate, (B) RCP$_{8.5}$ under the no migration hypothesis and (C) RCP$_{8.5}$ under the universal migration hypothesis. White areas correspond to cells for which the suitability index was below the species specific logistic threshold. Grey areas correspond to cells requiring extrapolation. Suitability index classes: light green [species specific threshold up to 0.55], yellow [0.55 - 0.65], and red [0.65 -1].
