S4 Fig. History of depression according to rs1863918 genotypes.

The patients were stratified into two groups according to rs1863918 genotypes, as follows: those with TT/TG (n=221) or GG (n=163). The proportion of patients with a history of depression was significantly higher in patients with rs1863918 TT/TG than in those with GG (P=0.007, by chi-square test).
