**S1 Figure.** Placental DNA methylation at individual *SLC6A4* loci in infants of mothers with normal glucose tolerance (NGT; n=32) and mothers with gestational diabetes mellitus (GDM, n=18). CpG sites are designated according to cytosine positions in NCBI reference sequence NG_011747.2 (GeneBank). Shown are means and standard errors. Indicated p-values were calculated by Mann-Whitney U test.
