S1 Figure. Comparison of Sm\(^\text{r}\) and Rif\(^\text{r}\) resistant mutant frequencies in representatives of the indigenous strains and the reference strain *P. putida PaW85*. The median value of the frequency of Sm\(^\text{r}\) mutants of the strains C70 and P4 was 0 (the mean values were $1.65 \times 10^{-9}$ and $4.8 \times 10^{-10}$, respectively).
