S3 Fig. Principal components analysis (PCA) of CHC composition of five geographic morphs of *A. pismum* on host plants *V. faba* and *T. repens*. Wingless adults of each morph reared on *V. faba* or *T. repens* were used for SPME sampling (7 µm PDMS). Shown are score plots of PC 1 versus 2 with percentages of total variance denoted in parentheses. Each symbol represents an aphid individual. Data points for each group are enclosed with a line.
