Supporting information

S1 Fig. The Bland-Altman plot of the overall measuring of glucose level from PTGMS and A-Line. Glucose levels of preterm infants recorded by RTGMS and A-Line throughout the 72-hr were analyzed. To assess the degree of agreement of both method, several values were calculated. The overall sample size: 390; difference of mean: -0.2589; Stan Dev.: 12.5535; lower limits of agreement (LOA): -24.8638; upper LOA: 24.3459.
