S1 Modulation of selected BH3-only protein levels in PC-3 and LNCaP cells treated with LA-12/cisplatin and TRAIL. The level of Bid, Noxa and Bim in PC-3 and LNCaP cells pretreated (24 h) with LA-12 (0.5/2.5 μM) or cisplatin (10/5 μM) and treated (4 h) with TRAIL (5/20 ng/ml), respectively, detected by Western blotting. β-actin served as a loading control. Results are representative of at least three independent experiments.
