S6 Fig. Tumour size in control and DEC treated mice. NOD-Scid mice were subcutaneously engrafted with 15\times10^6 CLBL-1 cells and at an average tumour volume of 800 mm$^3$ were treated with DEC (n = 4) or vehicle only (n = 4). DEC was administered four times at the dose of 2 mg/kg (Day 1) and 4 mg/kg (Days 2, 3, 4) through i.p. injections. At the sacrifice, tumours transplanted were collected and measured in size (mm$^3$).
