S2 Fig. Limit of quantification (LOQ) from *Streptomyces* sp. VV/E1 and VV/R4 strains. Coefficient of variation \[CV = 100 \times (\bar{SD}/\text{mean value})\] of the back-calculated amounts of genomic DNA from (A) *Streptomyces* sp. VV/E1 and (B) *Streptomyces* sp. VV/R4 by qPCR assays (5 replicates). Horizontal dashed lines correspond to \(CV = 35\%\) and vertical dashed lines indicate the lowest quantity of DNA with a \(CV\) below 35\% (obtained by interpolation). Grey symbols indicate the presence of negative (“non-detected”) replicates among samples.
