Supplemental Figure S11: Increased frequencies of $\alpha 4\beta 7^+$ CD4$^+$ T cells after in vitro stimulation with bead-bound anti-CD3/CD28.

A Percentage of CD4$^+$ T cells. B Percentage of $\alpha 4\beta 7$-expressing CD4$^+$ T cells. C Mean fluorescence intensity (MFI) of $\alpha 4\beta 7$-expressing CD4$^+$ T cells. D Percentage of $\alpha 4\beta 7$-expressing CD4$^+$ T cells after stimulation with retinoic acid (RA) and bead-bound CD3/CD28. Day 0 depicts the status of the cells after 6 hours of stimulation. Friedmann tests for multiple comparisons were performed.
