# Correction: Equations for Lipid Normalization of Carbon Stable Isotope Ratios in Aquatic Bird Eggs

## The PLOS ONE Staff

In the Discussion section, there is an error in the equation for calculating  $\delta^{13}\text{C}$  in non-extracted egg tissue, listed in the section titled “What equation to use?” In the equation, the  $\delta^{15}\text{N}$  coefficients are switched for the  $\delta^{13}\text{C}$  coefficients. Please view the complete, correct equation here:

$$\delta^{13}\text{C}_{\text{lipid-extracted}} = \delta^{13}\text{C}_{\text{non-extracted}} - 4.46 + 7.32 * \text{Log}_{10}(\text{C} : \text{NRatio})$$
