

S7 Fig. (A) HPLC chromatogram (detection at 254 nm) of substrate **27** (10 μ M) after 120 min incubation with caspase-3 or caspase-7 (0.3 μ M). (B) Time-dependent increase in fluorescence ($\lambda_{\text{Ex/Em}}$ 485/528 nm) of **27** (0.6 μ M) during 120 min incubation with caspase-3 or -7 (15 nM).
