

S2 File: Univariate models for calculating repeatability.

Univariate Model 1: Latency to enter nest (LEN)

```
UModel1 <- lmer(logitLEN ~ SEX + TRIALRANK + TEMP + WINDSP + SUNSHINE + DAYSSINCELAID  
+ (1|BIRDID) + (1|SITEID), data = Neophobia)  
  
LEN_Repeatability <- rpt(logitLEN ~ SEX + TRIALRANK + TEMP + WINDSP + SUNSHINE +  
DAYSSINCELAID + (1|BIRDID) + (1|SITEID), grname = c("BIRDID", "SITEID", "Fixed"),  
data = Neophobia, datatype = "Gaussian", nboot = 1000, npermut = 0)
```

Univariate Model 2: Number of attacks (NA)

```
UModel2 <- glmer(NA ~ SEX + TRIALRANK + LEN + TEMP + WINDSP + SUNSHINE +  
DAYSSINCELAID + (1|BIRDID) + (1|SITEID), family = poisson, data = Neophobia)  
  
NA_Repeatability <- rpt(NA ~ SEX + TRIALRANK + LEN + TEMP + WINDSP + SUNSHINE +  
DAYSSINCELAID + (1|BIRDID) + (1|SITEID), grname = c("BIRDID", "SITEID", "Fixed"),  
data = Neophobia, datatype = "Poisson", nboot = 1000, npermut = 0)
```

Univariate Model 3: Alarm call response (ACR)

```
UModel3 <- glmer(ACR ~ SEX + TRIALRANK + STATUSBEFORE + TEMP + WINDSP + SUNSHINE +  
DAYSSINCELAID + (1|BIRDID) + (1|SITEID), family = binomial, data = Alarm)  
  
ACR_Repeatability <- rpt(ACR ~ SEX + TRIALRANK + STATUSBEFORE + TEMP + WINDSP +  
SUNSHINE + DAYSSINCELAID + (1|BIRDID) + (1|SITEID), grname = c("BIRDID",  
"SITEID", "Fixed"), data = Alarm, datatype = "Binary", nboot = 1000, npermut = 0)
```

Univariate Model 4: Number of captures (NC)

```
UModel4 <- glmer(NC ~ SEX + (1|SITEID), family = poisson, data = NumCaptures)  
  
NC_Repeatability <- rpt(NC ~ SEX + (1|SITEID), grname = c("SITEID", "Fixed"), data =  
NumCaptures, datatype = "Poisson", nboot = 1000, npermut = 0)
```
