## The Questionnaire of Baecke et al for Measurement of a Person's Habitual Physical Activity

Overview:

Baecke et al developed a questionnaire for evaluating a person's physical activity and separating it into three distinct dimensions. The authors were from the Netherlands.

Indices for physical activity:
(1) work activity
(2) sports activity
(3) leisure activity

Sport Index

| Question | Response | Points |
| :---: | :---: | :---: |
| Do you play sports? | yes then calculate sport score | (see below) |

| Data on Most Frequently Played Sport | Finding | Value |
| :--- | :--- | :---: |
| What sport do yo play most frequently | low intensity | 0.76 |
|  | medium intensity | 1.26 |
|  | high intensity | 1.76 |
| How many hours do you play a week? | $<1$ hour | 0.5 |

|  | $4-6$ months | 0.42 |
|  | $7-9$ months | 0.67 |
|  | $>9$ months | 0.92 |

where: • The sport intensity is divided into 3 levels: (1) low level (billiards sailing bowling golf etc) with an average energy expenditure of $0.76 \mathrm{MK} / \mathrm{h}$; (2) middle level (badminton cycling dancing swimming tennis) with an average energy expenditure of $1.26 \mathrm{MJ} / \mathrm{h}$; (3) high level (boxing basketball football rugby rowing) with an average energy expenditure of $1.76 \mathrm{MJ} / \mathrm{h}$

| Data on Second Most Frequently Played Sport | Finding | Value |
| :--- | :--- | :---: |
| What sport do you play most frequently | low intensity | 0.76 |
|  | medium intensity | 1.26 |
|  | high intensity | 1.76 |

simple sports score $=\left(\left(\right.\right.$ value for intensity of most frequent sport) ${ }^{*}$ (value for weekly time of most frequent sport) * (value for yearly proportion of most frequent sport)) * ((value for intensity of second sport) * (value for weekly time of second sport) * (value for yearly proportion of second sport))
sport index $=($ SUM(points for all 4 parameters) $) / 4$
