

Table S8. Statistical analysis of residual virus titers determined after each treatment with different concentrations of iota-carrageenan in Diluent P3 (xylitol 50 mg/mL adjusted to pH 6-7)

Kruskal Wallis test	Chi-square = 17, degrees of freedom = 5, p-value = 0.0045 This means that there are statistically significant differences between the treatments ($p < 0.05$)
