Table S3. Multiresponse permutation procedure (MRPP) analysis of group dissimilarities showing mean citation distance between articles and mean source articles distance between citations in each citation group. The chance-corrected agreement index (A) expresses the within-group homogeneity and has a maximum value of 1 when there is no dissimilarity among elements of any group. The p-value is the probability of obtaining by chance a value of A equal or larger than the observed value.

Citation Group	Among Articles According to Their Citations					Among Citations According to Their Source Articles			
	Group Size	Distance	A	p-value		Group Size	Distance	A	p-value
C1	138	0.98	0.010	$<10^{-3}$		631	0.98	0.013	$<10^{-3}$
C2	44	0.96				226	0.95
