

	Pool of 10	Pool of 50
PCR (1938) ^a	80.08	85.81
sHC (2742) ^a	98.72	98.80

a: The number of variants called in Pool of 1

Table S25: Variation detection sensitivity as pool size grows before duplicate removal. This table shows the percentage of the variants called in the pool of 1 individual that are also called as variants in the larger pool sizes. The individual in the pool of 1 was also in each subsequent larger pool, therefore all variants called in the pool of 1 should also be found in all subsequent pools.
