For Cb5 and FAD3 co-expression study 18:2 were added to the culture before induction with galactose. FAMES were analyzed by GC-FID. Induction time for culture maintained at 28°C and 15°C were 48 and 96 hour respectively. Values represents mol percentage of total fatty acids. ± represents SD of three independent cultures. W= wild type yeast;

M= mutant yeast disrupted in endogenous Cb5 gene; ND= Not detected. \*Clutures not fed with 18:2.
