

Result of Figure S6; Proliferation of splenic CD4⁺ T-cells in EW-fed MLN-ectomized OVA23-3 mice.

The proliferative responses of splenic CD4⁺ T-cells from MLN-ectomized OVA23-3 mice on day 28 of the EW diet were significantly ($P < 0.05$) attenuated compared with those from CN-fed MLN-ectomized OVA23-3 mice (Figure S6). The proliferative response on day 28 was similar between EW-fed MLN-ectomized and sham-operated mice (Mock EW).
