

Table S10. The relationship of methylation conservation and expression divergence with small RNA abundance controlled

<b>Rice</b>					
<b>expression level divergence</b>		<b>CHM&lt;CLM level</b>			
p value of wilcox test of <b>expression level</b> changes	1.01E-02	number of paralogs with CHM level	84	number of paralogs with CLM level	117
					24nt ratio 0.244
		<b>CHM&lt;NCM level</b>			
p value of wilcox test of <b>expression level</b> changes	5.16E-02	number of paralogs with CHM level	84	number of paralogs with NCM level	135
					24nt ratio 0.2869
<b>CHM&lt;CLM pattern</b>		<b>CHM&lt;CLM pattern</b>			
p value of wilcox test of <b>expression level</b> changes	7.13E-04	number of paralogs with CHM pattern	98	number of paralogs with CLM pattern	110
					24nt ratio 0.618
<b>CHM&lt;NCM pattern</b>		<b>CHM&lt;NCM pattern</b>			
p value of wilcox test of <b>expression level</b> changes	1.50E-01	number of paralogs with CHM pattern	98	number of paralogs with NCM pattern	103
					24nt ratio 0.5386
<b>Arabidopsis</b>					
<b>expression level divergence</b>		<b>CHM&lt;CLM level</b>			
p value of wilcox test of <b>expression level</b> changes	3.95E-02	number of paralogs with CHM level	61	number of paralogs with CLM level	120
<b>CHM&lt;NCM level</b>		<b>CHM&lt;NCM level</b>			
p value of wilcox test of <b>expression level</b> changes	7.03E-03	number of paralogs with CHM level	61	number of paralogs with NCM level	94
<b>CHM&lt;CLM pattern</b>		<b>CHM&lt;CLM pattern</b>			
p value of wilcox test of <b>expression level</b> changes	0.1351	number of paralogs with CHM pattern	59	number of paralogs with CLM pattern	115
<b>CHM&lt;NCM pattern</b>		<b>CHM&lt;NCM pattern</b>			
p value of wilcox test of <b>expression level</b> changes	0.04273	number of paralogs with CHM pattern	59	number of paralogs with NCM pattern	48
