Supplementary Figure S1. Immunostaining of plakoglobin siRNA treated WT and *CTNNB1* gene disrupted clones. A) Immunostaining of untransfected, control and plakoglobin siRNA transfected WT and gene disrupted clones as indicated. The cells were stained with anti p120-catenin Ab 72 hours after siRNA transfection. B) Immunostaining as in A with anti α -catenin Ab. C) Immunostaining as in A with anti E-cadherin Ab.
