Figure S7. A global pairwise alignment of AM854 and APH\_0338 (OmpA) using lalign. The line above the alignment (AM854 aa19-68) includes the binding domain of APH\_0338 (aa59-74) and denotes the peptide used in the ELISAs. Amino acids that share identity are in white text with a black background. Conservative amino acid replacements are in white text with a gray background.
