

S1 Fig. The Effects of Alternative Bandwidths.

Note: The estimated effects of the school entry cutoff on the rate of mortality by suicide with the 95% confidence intervals are plotted against different bandwidths that range from ± 2 to ± 91 . The estimation with the bandwidth of ± 2 includes 4 observations from March 31 to April 3rd, while the estimation with the bandwidth of ± 91 includes 182 observations from January 1st to July 1st. Source: Birth records (1974-1985) and death records (1989-2010), the Vital Statistics of Japan.
