

S5 Table Paternal unemployment and low parental education level as risk factors for non-completion of secondary education: single effects of both exposures, joint effects when using one reference category, and measures of interaction on additive scale.

	Estimate	95 % confidence interval	
		Lower limit	Upper limit
Odds ratios representing single effects			
Paternal employment	1 (ref)		
Paternal unemployment	1.90	1.83	1.97
High education level	1 (ref)		
Low education level	2.26	2.19	2.33
Odds ratios representing joint effects			
Paternal employment and high education level	1 (ref)		
Paternal unemployment and high education level	1.93	1.84	2.03
Paternal employment and low education level	2.28	2.20	2.35
Paternal unemployment and low education level	4.18	3.94	4.44
Measures of interaction on additive scale			
RERI	0.97		
AP	0.23		
S	1.44
