

S2 Figure: Normalized read counts between all WBC. Normalized read counts show a homogeneous and comparable distribution among WBCs. The boxes extend from the first to third quartile values of the data, with a line at the median. The upper whiskers extend to last datum lower than third quartile + 1.5 * interquartile range (IQR). The lower whiskers extend to the first datum greater than first quartile - 1.5 * IQR. Outlier points are those past the end of the whiskers.
