

Table S2: Core Biodiversity Scientists. For each 5-year time period from 1945 to 2014, the twenty most frequently cited scientists, based on the total number of citations, were identified. Early time periods have fewer core scientists due to a lack of publications in these periods. In the list, the core scientists are generally ordered according to the number of citations for each time period (exceptions are researchers who are core scientists for several time periods; these are listed first).

Time period	Gender	Core Scientist	Institution	Country	Affiliation (PhD or current)	Number of publications (1945-2014)	Number of publications (current time period)	Times of citation (current time period)	Times of citation (1945-2014)	Betweenness Centrality (1945-2014)	Source
