

Fig S3. Cellularity of TM infected Mina WT and KO. The total cellularity, total number of CD19⁺ and CD11c⁺DC from MLN of TM infected Mina WT and KO were assessed by flow cytometry and plotted. Statistical analysis was carried out by Mann-Whitney test. (WT and KO, n=5 each for total cellularity and CD11c⁺ DC and for CD19⁺ cells WT n=5; KO n=3).
