

S1 Fig. Lack of direct effects of eugenol and cinnamaldehyde on endothelial L-citrulline formation. Endothelial cells were incubated for 10 min with 1 μ M A23187, 1 mM eugenol, 1 mM cinnamaldehyde or 0.1% DMSO (solvent). Conversion of L-[3 H]arginine into L-[3 H]citrulline was determined as described in the Materials and methods section of the main text. Data are mean values \pm SEM (n=3). *p<0.05 vs. control as determined by ANOVA and Dunnett's post hoc test.
