

S1 Fig. Box plots illustrating a significant increase of the cytokines concentration in COVID-19 patients (n = 51) according to the level of respiratory functional status (the WHO scale). The cytokines levels of healthy donors (n = 18) are shown. The colored squares associated with each cytokine illustrate the different orientations of the immune response. (*p<0.05; **p<0.01, *p<0.001, ****p<0.0001).**
