Figure S4. Lower hydrogen peroxide levels in rice leaves infiltrated with *X. oryzae* pv. oryzae BLS256 (Xoc) compared to *X. oryzae* pv oryzae PXO99A (Xoo)- or mock-treated leaves. Hydrogen peroxide activity was determined in 10 cm leaf segments 4 days after infiltration with Xoc, Xoo, or water (Mock), using a chemiluminescence method [1]. The difference between catalase-treated and non-treated samples was considered a relative measure of H$_2$O$_2$. Values are averages of three replicates. Vertical bars show standard deviation.
