S2 Fig. Characterization of immune subsets in uninfected Zbtb32−/− mice.

(a) Spleen, thymus, mesenteric lymph nodes (mLN) and peripheral lymph nodes (pLN) from WT and Zbtb32−/− mice were analyzed by flow cytometry to characterize T cell subsets. Representative data are shown.

(b) The proportions of naive (CD44lo CD62Lhi), effector (CD44hi, CD62Llo) and memory (CD44hi CD62Lhi) CD8+ and CD4+ T cell subsets in spleen, mesenteric lymph nodes (mLN) and peripheral lymph nodes (pLN) of representative WT and Zbtb32−/− mice are shown.
