Supplemental Figure 3. Early, but not late, IL-6 signalling regulates RSV induced disease. 8 week old BALB/c female mice were infected with $8 \times 10^5$ ffu of RSV A2 i.n. and dosed with either αIL-6 or isotype control antibody as shown in Figure 5A. Clinical symptom scores were taken daily. Data are representative of $n = 5$ mice per group and 2 independent experiments. Area under the curve (AUC) was calculated and Mann-Whitney test between control and αIL-6 treated groups for each regime carried out.
