S2 Fig. Cellularity of MLN and spleen of naïve and Hpb-infected C57BL/6 (B6) and IRF-8 deficient mice. Total cell numbers were determined in (A) MLN and (B) spleen of naïve and infected B6, BXH-2, or Irf8^-/- mice on day 14 p.i. after primary or challenge Hpb infection. n=7-15 mice per group. Data pooled from independent experiments are shown and are presented as mean ± SEM. *, p ≤ 0.05; ****, p ≤ 0.0001.
